The New England Journal of Medicine (NEJM) is recognized as the world's leading medical journal and website. NEJM publishes the best research and information at the interface between biomedical science and clinical practice and presents this information in understandable, clinically useful formats that inform healthcare practice and improve patient outcomes.

The Cochrane Library is a collection of databases that contain high-quality, independent evidence to inform healthcare decision-making.

BMC Medicine open access, transparent peer-reviewed general medical journal. BMC Medicine publishes outstanding and influential research in all areas of clinical practice, translational medicine, medical and health advances, public health, global health, policy, and general topics of interest to the biomedical and sociomedical professional communities.

PubMed Central (PMC) is a free full-text archive of biomedical and life sciences journal literature at the U.S. National Institutes of Health's National Library of Medicine (NIH/NLM)

Journal of The American Medical Association (JAMA) is an international peer-reviewed general medical journal and a member of the Network, a consortium of peer-reviewed, general medical and specialized publications.

JAMA is the world's most widely distributed medical journal with over 1.8 million electronic readers. The journal publishes a variety of articles on medical topics: original research, clinical studies, individual patient cases, meta-analyses, essays, as well as literary texts, including medical poetry.

Free Medical Journals is a site where in the coming years the most important medical journals will be available online for free and in full text format. Unrestricted access to scientific knowledge, the new standard in medical publications, will have a major impact on medical practice.
